

Course Description INSM

Implementation NetScreen Security Manager

This two-day course covers operations and implementation of NetScreen Security Manager (NSM). Students will practice using the product to manage a classroom lab environment.

Target audience

Network engineers, support personnel, reseller support, and others responsible for implementing NetScreen products utilizing the advanced features covered in this class.

Objectives

By the end of this course, students will be able to use NetScreen Security Manager to manage NetScreen Firewall/VPN products Specific topics include:

- NSM concepts and terminology
- Domains and Administrators
- Adding a New Device
- Basic Device Configuration
- Staging with Templates
- Device Updating
- Objects and Policies
- VPN Concepts
- Route-based VPNs
- Policy-based VPNs
- Logging, Monitoring, and Reporting

Prerequisites

This course assumes that students have successfully attended the [INSG](#) course or have equivalent experience with NetScreen's ScreenOS. Specifically, students need to be familiar with configuration of:

- Zones and Interfaces
- Virtual routers and inter-VR routing
- Policies
- Address Translation
- VPNs
